Skewness formula

$$\frac{n}{(n-1)(n-2)} \sum_{i=1}^{n} \left\{ \left(\frac{y_i - \bar{y}}{s_y} \right)^3 \right\}.$$

In this formula n is the sample size, $\bar{y}$ is the sample mean and s_y is the standard deviation of the sample.

It is the same definition as "G_1" on the Wikipedia if you look it up.
